## Behind the Lens

### GEORGIENNE BRADLEY

In 1991, The Cousteau Society recruited Georgienne Bradley, a bilingual biologist and diver, to travel through Latin America to scout film concepts. In Costa Rica, Georgienne spent six weeks living on remote Cocos Island. When Bradley returned and presented images documenting active shark finning, she was met with skepticism. President Figueres and Minister of Natural Resource, Alvaro

Ugalde, listened in disbelief until Bradley produced images that stood witness to her story. Within weeks, legislation was passed to combat the finning.

Bradley was convinced that strong conservation photography is an essential tool required to leverage public and political opinion. She launched the Costa Rica Marine Imaging Project (CRMIP). Working alongside President Figueres and Nobel Peace Prize winner, Oscar Arias, she created an innovative, nationwide educational campaign. Her images were used on national postage stamps and lottery tickets. Bradley also helped draft the proposal that led to Cocos Island becoming a World Heritage Site.

Jean Michel Cousteau wrote a letter applauding Bradley's efforts "The Costa Rica Marine Imaging Project, directed by Georgienne Bradley, will make a significant contribution to the environmental health of Costa Rica. I urge you to support this project which I strongly endorse."

As a professional photographer, Georgienne's editorial packages, calendars and commercial clients include *National Geographic*, *Time Magazine*, *Elle*, *GQ*, *Outside*, Citizen Watch, American Express and Continental Airlines. Her work has been the focus of three Paramount television shows.

ADAN Member since 1991, Georgienne has recently launched The Imaging Foundation which will use imagery to draw 'focus' to international conservation issues. DAN members are invited to join the next tax deductible, expedition. Check [Imagingfoundation.org](http://Imagingfoundation.org) for details.

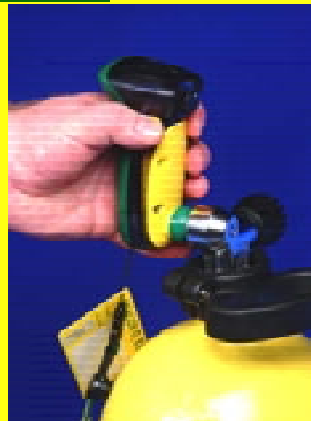

## NITROX TRIMIX DIVER?

### Don't Chance It, Check It!

with analyzers by Analox

## NITROX? Analox O2EII™!

TRIMIX? Try Analox

### Technical divers:

You're operating at the extremes of diving. You need total equipment reliability. The ATA™ is a true Trimix analyzer.

**First To** display He, O2 and Balance

**First To** give you a backlight standard

**First To** allow you to zero adjust He

Leaving you free to explore the depths
